

Urination Pain - Symptom (Male)

Definition

- Pain, burning or stinging when passing urine
- Suspect pain if a young child starts to cry while passing urine
- The feeling of "can't wait" to pass urine may occur. This is called urgency.
- Passing urine more often than normal. This is called frequency.

Health Information

Causes

- **Meatitis.** The pain can be caused by redness at the penis opening. The irritation can be from long bubble baths. The urine sample will be normal.
- **Bladder or kidney infections** (urinary tract infections) are possible at any age.
- **STD.** In teenagers, pain when passing urine can be from diseases spread during sex. A pus-colored discharge may come out of the penis. (called drip)

Diagnosis

- A urine sample needs to be checked to make the correct diagnosis.

Care Advice

1. **Overview:**
 - Pain with passing urine is never normal.
 - All children with painful urination need a urine checked.
 - Until a urine test is done, here is some care advice that should help.
2. **Give More Fluids:**
 - Give extra fluids to drink.
 - Reason: Dilutes the urine so that it does not sting.
3. **Pain Medicine:**
 - For pain when passing urine, give a pain medicine.
 - Give acetaminophen (such as Tylenol) or ibuprofen.
 - Use as needed.
4. **Avoid Soap:**
 - Avoid bubble baths.
 - Avoid getting soap on the opening at the head of the penis.
5. **What to Expect:**
 - If soap is the cause, the pain should go away within 24 hours.
6. **Return to School:**
 - Even if your child has a bladder infection, it cannot be spread to others.
 - Your child does not need to miss any school or child care.

Call Your Doctor If

- Pain when passing urine becomes severe
- Fever occurs
- You think your child needs to be seen
- Your child becomes worse
